

## EMS Protects Top European Bakery

A leading European sandwich bar chain was investing significantly in their main UK production plant.

Whilst bringing in a whole host of technological advancement to the plant, they needed a new fire alarm system with just as much cutting edge technology. The obvious choice was a wireless EMS FireCell system. FireCell offered the robustness and flexibility required at a busy plant undergoing major expansion.

The installation was a resounding success with all parties happy with the system and its installation.

EMS is the leading developer and manufacturer of wireless fire detection systems in the UK.

FireCell has been wholly developed by EMS to meet the requirements of EN54-25 and to satisfy the need for an easy to install fire detection system based on wireless technology.

FireCell is a totally wireless based solution that also incorporates HYBRID technology, providing maximum flexibility to meet today's demanding building requirements around fire safety.

Incorporating EMS Smart Cluster Technology and utilising the 868MHz European harmonised frequency band, FireCell was the first UK wireless fire system to meet EN54-25 and boasts a wireless coverage which exceeds other 868MHz based systems.
